

ISSCIENATES

People Ignorant of Science

Abstract

The word “isscienate” means “ignorant of science” It is the obvious equivalent of the words “illiterate” and “innumerate”. It starts with the letter “i”, then a double syllable of the letter that labels what the person is ignorant of, and ending in “ate.” The word isscienate is needed to focus attention on the problem that too high a proportion of people living in our scientifically dominated modern cultures is largely ignorant of science, and hence live in a “dark world” of superstition and ignorance.
